THE HUMAN MIND VS. THE COMPUTER

Like the concept of a “post-industrial society,” the cybernetics theory behind today’s cyber-space society is an anti-human fraud. LaRouche Youth Movement members Sky Shields, Creighton Cody Jones, and Peter Martinson dissect aspects of the hoax in our three feature articles, and Lyndon H. LaRouche, Jr., comments on their work, specifically on how the universe is organized for creative human intervention.

CO₂ DOES NOT DRIVE ‘CLIMATE CHANGE!’

Thousands of direct chemical measurements of CO₂ concentration in the atmosphere since the mid-19th Century show that the current claim of a human-induced CO₂ increase is a willful fraud. Ernst-Georg Beck reviews these measurements, taken by top chemical scientists, and shows how they are ignored by today’s global warming promoters.

Actual historical CO₂ measurements (upper line) and the IPCC values concocted from ice cores—a fable designed to convince you that atmospheric CO₂ levels are rising because of industrial activity. The chemical measurements are yearly averages of data from 48 measuring series at different locations ($\pm 3\%$ accuracy).
